

January 2019

Valued Customer,

At Lumaco, we have always been dedicated to offering only the highest quality valves and components, readily available and priced fairly. To balance rising material costs without compromising Lumaco's commitment to the quality of our product and to our customers, we have made the difficult decision to discontinue manufacture of our valve lines in 304 grade stainless steel. While both grades of stainless steel are durable and suited to our customer's applications, grade 316 stainless steel is superior in its corrosion resistance and is the preferred valve material in many applications.

By focusing our resources on the manufacture and warehousing of 316 grade stainless steel valves only, we can continue to offer our 316 grade stainless steel valves without a price increase for 2019.

Lumaco is a small company dedicated to our employees, our products and our customers. Please contact our Sales Team at [sales@lumaco.com](mailto:sales@lumaco.com) or (800) 735-VALV (8258) with any questions or concerns.
